ABSTRACT

This study aimed to investigate and compared potentialities for education management of basic educational institution committees at the secondary education level under the General Education Department in Roi Et province. The study was conducted in 12 aspects according to potentialities of 372 basic educational institution committee members. This member consisted of educational institution administrators, teachers' representatives, parents' representatives, community organizations' representatives, local administrative organizations' representatives, alumni's representatives, and qualified persons, obtained through the stratified random sampling technique. The instrument used for gathering data was a 5-level rating-scale questionnaire comprising 63 items based on Likert method which was distribution for each items from .657 to .927 and reliability coefficiently all for copy was .9936. The statistics used for analyzing data were mean, standard deviation, and F-test (One-way ANOVA) for testing hypotheses ; and when a statistically significant difference was found, the individual pair difference was tested by means of Turkey method (HSD).

The study results were as follows :

1. Basic educational institution committees as a whole and as classified according to the status of the committee having the potentiality for education management of basic educational institution committees as a whole and in each of the twelve aspects were at a high level.

2. The result of investigate potentialities for education management found that there was not different in the total. But in the individual pair, they had different potentialities at the .05 level of statistical significance of the administrators and the alumni's representatives.
