ABSTRACT

The objectives of this research were 1) To study the relationship between the factors Influencing Adversity Quotient (AQ) 2) To ensure the model of the relationship of factors influencing Adversity Quotient (AQ) and 3) To study the factors Influencing Adversity Quotient (AQ) of Bachelor degree level 1 at Rajabhat Maha Sarakham University. The samples of the study were 694 people from first-year students of 2nd semester 2011 and used the Multi-stage Random Sampling for selecting the sample. The tools used to collect the data were the factors rating scale Adversity Quotient (AQ) included 60 choices reliability .96 and the rating scale Adversity Quotient (AQ) included 40 choices reliability .86. Data was analyzed by descriptive statistics through SPSS version 11.5 and LISREL version 8.52 for a structural equation modeling analysis.

The results of the study were as follows :

1. The relationship between the factors Influencing Adversity Quotient (AQ) in Bachelor degree level 1 at Rajabhat Maha Sarakham University found the Control (CON) had positive correlation with Moderate Risk Taking (MRT), for the Ownership (OWN) also had positive correlation with Extraversion (EXT), Reach (REA) had positive correlation with Conscientiousness (CSN), and the Endurance (END) had positive correlation with Extraversion (EXT).

2. The relationship model of the factors Influencing Adversity Quotient (AQ) were : Chi-square : χ^2 was equaled to 175.93, Degree of Freedom = 94, P-value = 0.063, Chi-Square (χ^2/df) = 1.87, GFI = 0.92, AGFI = 0.94 and RMSEA = 0.042.

3. The factors which directly Influencing to Adversity Quotient (AQ) in Bachelor degree level 1 at Rajabhat Maha Sarakham University were : Achievement Motive, Personality, Responsibility, Future Orientation and Self-Confidence. And the factors which indirectly influencing to Adversity Quotient (AQ) were Responsibility and Personality.
